

Muryllo Dantas de Azevedo

Software Developer

[+55 84 99690-3223](tel:+5584996903223) | muryllo.dev@gmail.com | linkedin.com/muryllodev | github.com/MurylloAzvd | portfolio.muryllo.info

I am a technology enthusiast, constantly motivated by the potential to solve problems and generate value through software development. Throughout my career, I have had the privilege of working with amazing companies and professionals, which has significantly contributed to my growth.

When I develop an application, I always prioritize the user experience, starting with understanding their needs and requirements, and then seeking a technical solution that meets their expectations. I believe that the success of a project is based on clear communication of objectives and constant feedback throughout the development process.

My experience is primarily focused on the JavaScript ecosystem, where I have worked with technologies such as React, React Native, Node.js, and Next.js. I am constantly committed to expanding my knowledge and sharing insights to drive the quality and scalability of the products I develop.

Always seeking new challenges and opportunities. Feel free to get in touch and share ideas.

SKILLS

HTML / CSS / Javascript	MongoDB	Git
Typescript	Next.js	PostgreSQL
React	Styled-Components	NestJS
React Native	Tailwind CSS	Prisma
Node.js	Linux	WebSocket
Express.js		

PROFESSIONAL EXPERIENCE

B2BIT - Software House, Front-end Developer

OCT 2021 - PRESENT

Contribution to the development of MVPs and high-quality systems to meet the needs of various clients, ensuring effective and tailored solutions. Incorporating the following responsibilities and achievements:

- Development of web systems using modern technologies such as ReactJS and Typescript, ensuring performance and maintainability.
- Coding interfaces based on layouts designed in FIGMA, ensuring visual and functional consistency.
- Development of responsive web applications and landing pages, prioritizing user experience on different devices.
- Utilization of Next.js to implement SSR (Server Side Render), increasing indexing on search engines and attracting more traffic to pages.
- Building landing pages with high SEO performance, achieving a 99% score on Google Lighthouse.
- Development of mobile applications for Android and iOS with React Native, using Expo to streamline the development and deployment process.

- Integration of systems with payment APIs, allowing users to save credit cards and make payments via Pix with QR Code.
- Experience with Agile/Scrum methodologies, ensuring iterative and collaborative deliveries.

Fretec Entregas, Full-stack Developer

FEB 2021- SEP 2021

Responsible for the development and maintenance of an integrated platform for app-based delivery services, facilitating the connection between businesses and freelance drivers. My main responsibilities included:

- Front-end development with ReactJS, Redux, and Bootstrap.
- Mobile development with React Native and Firebase.
- Back-end development with Node.js, Express.js, and MongoDB.
- Development and implementation of a mechanism to collect delivery drivers' location data in the background, providing real-time visualization of their location in the system.
- Integration of push notifications in the app using Firebase, streamlining communication and alerting drivers about new delivery requests.
- Close collaboration with delivery drivers to continuously enhance the app, resulting in over 10 thousand downloads shortly after launch.
- Development of an internal web system used by the support team to troubleshoot issues and access information without relying on the development team.
- Implementation of public delivery tracking links for businesses, allowing customers to track their deliveries transparently and conveniently.
